

# Raspberry Pi Pico

Published April 2024

## Overview

Raspberry Pi Pico is the debut microcontroller-class board from Raspberry Pi. Built around our RP2040 silicon platform, Pico brings our signature values of high performance, low cost, and ease of use to the microcontroller space.

With a large on-chip memory, symmetric dual-core processor complex, deterministic bus fabric, and rich peripheral set augmented with our unique Programmable I/O (PIO) subsystem, RP2040 provides professional users with unrivalled power and flexibility. With detailed documentation, a polished MicroPython port, and a UF2 bootloader in ROM, it has the lowest possible barrier to entry for beginner and hobbyist users.

RP2040 is manufactured on a modern 40nm process node, delivering high performance, low dynamic power consumption, and low leakage, with a variety of low-power modes to support extended-duration operation on battery power.

Raspberry Pi Pico pairs RP2040 with 2MB of Flash memory, and a power supply chip supporting input voltages from 1.8-5.5V. It provides 26 GPIO pins, three of which can function as analogue inputs, on 0.1"-pitch through-hole pads with castellated edges. Raspberry Pi Pico is available as an individual unit, or in 480-unit reels for automated assembly.

## Specification

|                               |  |
|-------------------------------|--|
| <b>Form factor:</b>           | 21 mm × 51 mm  |
| <b>CPU:</b>                   | Dual-core Arm Cortex-M0+ @ 133MHz  |
| <b>Memory:</b>                | 264KB on-chip SRAM; 2MB on-board QSPI flash  |
| <b>Interfacing:</b>           | 26 GPIO pins, including 3 analogue inputs  |
| <b>Peripherals:</b>           | <ul style="list-style-type: none"><li>• 2 × UART</li><li>• 2 × SPI controllers</li><li>• 2 × I2C controllers</li><li>• 16 × PWM channels</li><li>• 1 × USB 1.1 controller and PHY, with host and device support</li><li>• 8 × PIO state machines</li></ul> |
| <b>Input power:</b>           | 1.8–5.5V DC  |
| <b>Operating temperature:</b> | -20°C to +85°C   |
| <b>Production lifetime:</b>   | Raspberry Pi Pico will remain in production until at least January 2036  |
| <b>Compliance:</b>            | For a full list of local and regional product approvals, please visit <a href="http://pip.raspberrypi.com">pip.raspberrypi.com</a>   |

# Physical Specification

Note: all dimensions in mm

## WARNINGS

- Any external power supply used with Raspberry Pi Pico shall comply with relevant regulations and standards applicable in the country of intended use.
- This product should be operated in a well-ventilated environment, and if used inside a case, the case should not be covered.
- Whilst in use, this product should be placed on a stable, flat, non-conductive surface, and should not be contacted by conductive items.
- The connection of incompatible devices to Raspberry Pi Pico may affect compliance, result in damage to the unit, and invalidate the warranty.
- All accessories used with this product should comply with relevant standards for the country of use and be marked accordingly to ensure that safety and performance requirements are met.
- The cables and connectors of all peripherals used with this product must have adequate insulation so that relevant safety requirements are met.

## SAFETY INSTRUCTIONS

To avoid malfunction or damage to this product, please observe the following:

- Do not expose to water or moisture, or place on a conductive surface whilst in operation.
- Do not expose to heat from any source; Raspberry Pi Pico is designed for reliable operation at normal ambient temperatures.
- Take care whilst handling to avoid mechanical or electrical damage to the printed circuit board and connectors.
- Whilst it is powered, avoid handling the printed circuit board, or only handle it by the corners to minimise the risk of electrostatic discharge damage.
